Table 2 on the following page provides the final constituents and preliminary weights for each index in the CoinDesk 20 family.

¹ This is the assets ranking in the CoinDesk 20 Selection process. Assets in top 15 are automatically included. A buffer is then applied to select the highest ranked current constituents ranking between 16 and 25 until 20 assets included. Next, if fewer than 20 assets included, the highest ranked non-constituents are included until 20 assets are selected. For more details refer to the CoinDesk 20 Methodology found [here](#). For other indices, refer to the Multi Asset Methodology [here](#).

² Weight of deletions is based on the constituent's weight in the index as of the reconstitution reference date.

³ The addition of TAO required the deletion of the lowest ranked constituent by market capitalization for each impacted index to maintain the target count.
